

Course Description

The Department of Information Technology was established in 1999 with a clear vision to prepare students for success in the rapidly evolving global technology landscape. Our mission is to develop highly skilled, ethical, and industry-ready IT professionals through a strong academic foundation combined with hands-on learning and real-world exposure. The curriculum is thoughtfully designed to strengthen core technical competencies while nurturing innovation, analytical thinking, and an entrepreneurial mindset.

With dedicated faculty, advanced learning facilities, and a robust campus placement ecosystem, the department empowers students to pursue rewarding careers in fields such as web development, data science, and research. At the same time, a strong emphasis is placed on higher education and competitive examination preparation, supporting students who aspire to pursue advanced studies in India and abroad. Choosing Information Technology at our institution means choosing a future-focused program committed to excellence, responsibility, and lifelong learning.

Key Highlights:

- Long-standing department established in 1999, known for producing talented IT professionals.
- Strong technical foundation leading to high employability and independent problem-solving skills.
- Excellent campus placement support with top technology companies.
- Emphasis on entrepreneurial thinking and ethical professional conduct.
- Solid preparation for higher education in top institutions in India and abroad.
- Graduates equipped for diverse roles like Web Developer, Data Scientist, Researcher, and more.
- In-house coaching for GATE, CAT, MAT, and other competitive exams to support advanced studies and government job aspirations.

This blend of academic strength, industry exposure, ethical grounding, and competitive exam preparation ensures that our graduates are well-prepared to thrive as capable, confident, and future-ready IT professionals.

Vision

To become a leader in Information Technology education, research and innovation, dedicated to develop sustainable solutions that contribute to the global community.

Mission

- To integrate quality professional education in Information Technology, fostering values and skills through outcome-based teaching and learning process.
- To provide a collaborative and conducive environment for interdisciplinary research and development of sustainable solutions to address real-world challenges.
- To foster an intellectual, innovative and entrepreneurial mindsets of the educators to develop IT professional.
- To create a culture of collaboration and support among teachers and students for sharing of ideas and knowledge.

Program Outcomes

- Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the

public health and safety, and the cultural, societal, and environmental considerations.

- Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- Project management and finance: Demonstrate knowledge and understanding of engineering and management principles and apply these to one's own work, as a member or leader in a team, to manage projects in multidisciplinary environments.
- Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
